

## Deepen Activities

1 What could the missing numbers be in this calculation?

$$2,273 \div \square = \square \text{ remainder } 25$$

I think I can find several solutions.

2 How many whole numbers less than 100 can you make using the numbers 1, 2, 3 and 4, without changing their order?

You can add, subtract, multiply, divide and use brackets.

For example,  $12 + 34 = 46$ .

I will think about the order of operations!

3 These digit cards can be arranged to create:

- A short division that has a remainder of 1
- A long division that has a remainder of 14

What could the two divisions be?
